

Help nocturnal wildlife, NatureSpec - Wildlife Safe Lighting

The NatureSpec™ LED lighting products will safely illuminate roadways, wharves, pathways, car parks and areas of commercial activity whilst limiting the effect of artificial light on our wildlife such as Turtles, Frogs, Owls and other animals.

Whilst outdoor lighting is required for human activity and safety, artificial light can be detrimental to our wildlife. Artificial light can have damaging effects on wildlife by disturbing their natural behaviors and negatively impacts these animals by turning their nights into days, disrupting their circadian rhythms. The lights can attract wildlife to areas considered harmful, such as roadways, pathways, car parks, terminal ports and commercial areas

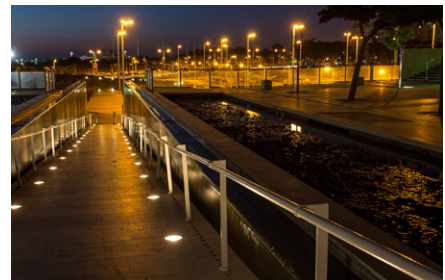

Studies have determined that sea turtle populations have suffered declines worldwide and their recovery largely depends upon managing the effects of expanding human populations and artificial lighting in these areas.

Six of the world's seven species of marine turtles live in waters around Australia and they are all found within the Great Barrier Reef World Heritage Area.

The light pollution produced from artificial lighting can be solved and the light emitted from NatureSpec™ Wildlife Safe Lighting is almost invisible to these animals.

NatureSpec™ lighting features unique LED technology that emits light in a wavelength which is safer for wildlife. The NatureSpec™ LED fixtures will safely illuminate areas whilst also protecting and minimising the effect of artificial light pollution on our wildlife.

Call us now to discuss how we can help safely illuminate your local environment.
